

RADIONUCLIDE SAFETY DATA SHEET					
RADIONUCLIDE: Se-75			FORMS: Soluble		
PHYSICAL CHARACTERISTICS HALF-LIFE: 119.8 days DECAY EMISSIONS					
Gammas / X-rays		Betas / Positrons (+) / Electrons*		Alphas	
E (keV)	%	E (keV, Ave)	%	E (keV)	%
265	59	10*	9		
136	58	13*	5		
11	32	85*	3		
280	25	124*	2		
- Only 4 most probable emissions per decay type included. Emissions below 10 keV or 1% excluded.					
STANFORD HAZARD CATEGORY C – level (low hazard): ≤ 20 mCi B – level (moderate hazard): > 20 mCi, ≤ 1 Ci A – level (high hazard): > 1 Ci					
EXTERNAL RADIATION HAZARDS Gamma dose rate, point source at 1 ft, 1 mCi: 2.25 mrem/h Beta dose rate to skin, point source at 1 ft, 1 mCi: 0 mrem/h Contamination skin dose, uniform deposit of 1 μ Ci per cm ² : 530 mrem/h			INTERNAL RADIATION HAZARDS Annual Limit on Intake: 500 μCi (Ingestion) 600 μCi (Inhalation) The values above indicate the activity taken into the body that would result in either 5 rem to the whole body (CEDE) or 50 rem to an organ or tissue (CDE).		
SHIELDING Gammas/X-rays: 4.4 mm of lead will reduce the gamma dose rate by 90%. Betas/electrons: 0.2 mm of plastic will absorb all emissions.			DOSIMETRY AND BIOASSAY REQS Whole-body and finger-ring dosimeters are required for handling 5 mCi or more, or 1 mCi amounts weekly . Urine assays may be required after large spills or contaminations.		
SPECIAL PROBLEMS AND PRECAUTIONS: 1. Recommended survey probe: Nal or PGM 2. Always wear protective gloves, a lab coat, and safety eyewear to protect the skin and eyes from contamination. Change gloves often. 3. Survey work areas before, during, and after work. Work areas may require shielding to keep dose ALARA. Instrument and smear surveys are required. 4. Segregate waste to those with half-lives greater than 120 days (excluding H3 and C14). Survey the waste disposal area to ensure exposure rates are less than 2 mR/hr at 1 foot. 5. Limit soluble waste to the sewer to less than 100 μCi/day per lab.
