

Electrical Safety Basics:

Do's & Don't's

DO

Unplug equipment and verify it is de-energized with a multimeter.

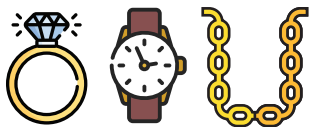

Inspect equipment before use, checking that connections are secure and insulation is intact.

Use wire nuts or wire connectors to join wires.

Verify that electrical components (e.g., wire, resistors, capacitors) are **rated for the current and voltage** you're using.

Remove jewelry, watches, and other metal items before electrical work.

DO NOT

Work on energized equipment.

Use equipment with **damaged components, loose connections, or missing insulation.**

Use **electrical tape** to make **permanent electrical connections.**

Exceed the rating limits of your equipment.

Wear metal objects while performing electrical work
